Key information document production date: 31/12/2025

What is this product?

Type: Mutual Fund (hereafter «M/F») of Law 4099/2012

Term: The Fund has not a predetermined maturity. The Fund's dissolution may occur in case any of the conditions referred to in article 9 par. 1 of L.4099/2012 are met in accordance with the article 11 of the Fund's Regulation. The redemption of the MF's units is mandatory when requested by the unitholder.

Objective: The objective of the Fund is to achieve a return based on its investment policy, over the long-term, mainly derived from capital appreciation and additionally from income, through investments in transferable securities, mainly in the domestic capital market. The Fund mainly invests in shares of companies listed on the Athens Stock Exchange, which are included in the General Index of the ATHEX. The Fund may also invest in shares of companies listed on international stock exchanges, taking into account the stock market conditions and the macroeconomic developments. The choice of transferable securities is made by a combination of quantitative and qualitative criteria, such as the fundamentals, capital structure, dividend yields, etc. Finally, the Fund aims to make the best possible use of its cash by investing it in interest-bearing investments in the form of fixed-term deposits and other related money market instruments. In the context of leveraging and/or hedging assets of the portfolio, the Fund may take long or short positions in derivative instruments, mainly on stock market indices or equities. The Fund is actively managed, and the composition of its portfolio may differ from that of the benchmark. The benchmark is used for the purpose of comparing the performance of the Fund, which may deviate from the benchmark performance. The profits and income of the Fund are reinvested.

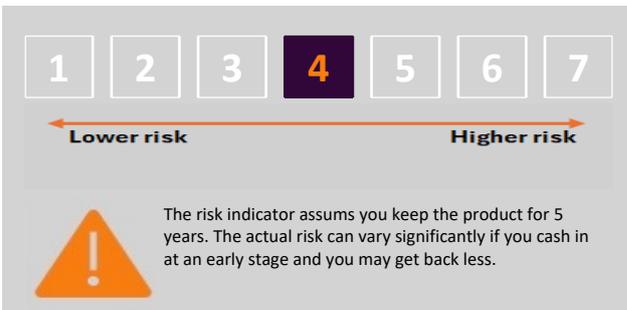

Reference Benchmark: 100% Athens Composite Share Price Index.

Intended retail investor type: The Fund mainly targets long term investors seeking capital appreciation through an equity portfolio, consisting mainly of Greek companies, willing to take a high level of investment risk.

Custodian: PIRAEUS BANK S.A.

What are the risks and what could I get in return?

Risk indicator

The summary risk indicator is a guide to the risk level of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you.

We have ranked the Fund as 4 out of 7, which rates the potential losses from future performances at a medium level, and adverse market conditions could impact the Fund's ability to pay you.

This product does not include any protection from future market performance so you could lose some or all of your investment.

If the Fund cannot pay you what is owed, you could potentially lose your entire investment.

Besides the market risk, the currency risk and the derivatives risk, risks that are substantially related to the Fund and are not taken into consideration by the risk indicator, are the following:

- **Liquidity Risk:** May arise from unfavourable market conditions and affects the Fund's ability to sell assets. The investor may receive an amount smaller than the calculated fair value when making a liquidation decision due to a possible reduction in the price of the unit in the interim, while he may not be able to redeem the units of the desired time. Also, under extreme liquidity conditions the net price of the unit may decrease significantly.
- **Credit Risk:** May arise from the possibility of a bond issuer's default.
- **Counterparty Risk:** The risk of failing to settle a transaction on financial instruments due to the counterparty's non-payment or inability to deliver securities on time.
- **Risk spreading:** May arise from the limited dispersion of assets. This risk is reduced by the limits set for investing in the same issuer. With these limits, a greater dispersion is being achieved.
- **Risk of asset reduction:** May arise from the reduction of the Fund's assets due to the redemption of its units.
- **Operational Risk:** It is related to human errors, inadequate processes and weaknesses in the company's systems, or external factors.
- **Custodian Risk:** The risk of losing assets due to acts or omissions by the Custodian or even due to fraud in case the Custodian or any third party who has been entrusted with custody of the Fund's assets proves to be insolvent.

What are the risks and what could I get in return?

Performance scenarios

What you will get from this product depends on future market performance. Market developments in the future are uncertain and cannot be accurately predicted. The unfavourable, moderate, and favourable scenarios shown are illustrations using the worst, average, and best performance of the product over the last 10 years. Markets could develop very differently in the future.

Recommended holding period: 5 years

Investment example: 10.000 EUR

| Performance scenarios | | 1 year | 5 years (Recommended holding period) |
|-----------------------|--|---------|---|
| Minimum | There is no minimum guaranteed return. | | |
| Stress scenario | What you might get back after costs | 2,800€ | 2,430€ |
| | Average return each year | -72.0 % | -24.7 % |
| Unfavourable scenario | What you might get back after costs | 6,910€ | 8,940€ |
| | Average return each year | -30.9 % | -2.2 % |
| Moderate scenario | What you might get back after costs | 11,050€ | 16,620€ |
| | Average return each year | 10.5 % | 10.7 % |
| Favourable scenario | What you might get back after costs | 17,660€ | 33,870€ |
| | Average return each year | 76.6 % | 27.6 % |

The figures shown include all the costs of the product itself, but may not include all the costs that you pay to your advisor or distributor. The figures do not take into account your personal tax situation, which may also affect how much you get back. The stress scenario shows what you could lose at extreme market conditions. The unfavourable scenario occurred for an investment between March 2019 - March 2020 (if you redeem after 1 year) and between December 2015 - December 2020 (if you redeem after 5 years). The moderate scenario occurred for an investment between February 2016 - February 2017 (if you redeem after 1 year) and between June 2018 - June 2023 (if you redeem after 5 years). The favourable scenario occurred for an investment between March 2020 - March 2021 (if you redeem after 1 year) and between October 2020 - October 2025 (if you redeem after 5 years).

What happens if the fund is unable to payout?

The investor may face a financial loss (equal to a part or the entire investment) in the event of default of the Mutual Fund. Such a potential loss is not covered by any guarantee fund. In this context, there is a potential default risk if the assets of the Mutual Fund held by the Custodian are lost. The Custodian is liable to the Mutual Fund or to the investors of the Mutual Fund in the event of loss by the Custodian or one of its representatives of the financial products held by the Custodian, unless the Custodian can prove that the loss has arisen because of an external event beyond its reasonable control and the consequences would be unavoidable despite its reasonable efforts to the contrary. In all other cases, the Custodian is liable in the event of its negligent or intentional failure to properly fulfill its obligations pursuant to L. 4099/2012 and the UCITS Directive 2009/65/EU as well as any applicable legislative and regulatory framework governing Mutual Funds.

What are the costs?

The person who provides you investment advice on this product or sells it to you, may charge you an additional cost that is not included in the expenses mentioned herein. If this happens, this person will inform you about this cost and how your investment is affected.

Cost over time

The tables show the amounts that are taken from your investment to cover different types of costs. These amounts depend on how much you invest and how long you hold the product. The amounts shown here are illustrations based on an example investment amount and different possible investment periods.

We have assumed:

- In the first year you would get back the amount that you invested (0% annual term). For the other holding periods we have assumed the product performs as shown in the moderate scenario.
- 10.000 EUR is invested.

| Investment EUR 10 000 scenarios | If you exit after 1 year | If you exit after 5 years (Recommended holding period) |
|---------------------------------|--------------------------|---|
| Total costs | 599€ | 3,072€ |
| Annual cost impact (*) | 6.0 % | 5.6 % |

(*) This illustrates how costs reduce your return each year over the holding period. For example, it shows that if you exit at recommended holding period, your average return per year is projected to be 16.3% before costs and 10.7% after costs.

What are the costs?

Composition of costs:

One-off costs upon entry or exit

| | | |
|-------------|---|--------|
| Entry costs | The impact of costs you pay when entering this investment. This is the maximum percentage you pay, and you may pay less. The entry costs vary depending on the investment amount. | 1.20 % |
| Exit costs | The impact of costs to redeem your investment. | 0.00 % |

Ongoing costs taken each year

| | | |
|---|---|--------|
| Transaction costs | The impact of cost on an annual basis when we buy and sell the underlying investments for the product. This is an estimate of our cost when we buy and sell the underlying investments for the product. The actual percentage will vary depending on the quantity we buy or sell. | 0.64 % |
| Management fees and other administrative or operating costs | The impact of costs per year for the operation of the Mutual Fund. This is an estimate based on actual costs over the last year. | 3.55 % |

Additional costs taken under specific conditions

| | | |
|------------------|--|--------|
| Performance fees | The impact of performance fees. It amounts to 20% on any positive difference between the return of the M/F and the return of the Benchmark, before deducting the performance fee on an annual basis, while it is also calculated in periods of negative performance e.g. the M/F has outperformed the benchmark while having negative performance. The aggregated cost estimation includes the average over the last 5 years. The actual amount will vary depending on how well your investment performs. Further information about the performance fees is available in the product's prospectus. Reference Benchmark: 100% Athens Composite Share Price Index. | 0.66 % |
|------------------|--|--------|

How long should I hold it and can I take money out early?

Recommended holding period: 5 years

The minimum recommended holding period, given the Mutual Fund's investments nature and its objective for a return achievement, is 5 years. In most cases, added value will be generated over a long term period.

Investors may request daily (working days in Greece) the redemption of their units before the recommended holding period. The investor is not charged with redemption costs.

How can I complain?

If you wish to file a complaint with respect to the Mutual Fund, or Optima asset management MFMC or the Mutual Fund's distributors or the person that offers advise with respect to the Mutual Fund, you may submit your complaint via post or e-mail. Complaints can be submitted in writing: 330 Olympionikon & Venizelou, 15451, N.Psychiko, Athens, Greece, E-mail address: info@optimaeadak.gr.
